

**SAMUEL JAMES**

Network Deployment & Infrastructure Leader

Data Center Networks • Network Engineering • Automation

Network infrastructure professional with 10+ years delivering mission-critical environments. I lead data center network builds from planning and materials through installation, troubleshooting, quality validation, and operational handoff — leading teams of 8-14 — while using automation and AI tooling to improve how infrastructure teams work.

PROFESSIONAL SUMMARY

Network deployment and infrastructure leader who delivers mission-critical data center networks from planning through operational handoff. Deep in the physical and network layers — Cisco networking, VLANs, routing, switching, firewalls, and fiber & copper structured cabling at scale — with the project ownership to run capacity planning, scope of work, vendor management, device build, troubleshooting, and quality validation. I bring Linux, AWS, and infrastructure automation (including agentic AI tooling) to bear on making infrastructure delivery more scalable and reliable. Known for leading teams of 8–14, developing technicians, and delivering results in high-availability, 24/7 environments — currently deepening enterprise network engineering through the Cisco CCNP track.

</> FEATURED PROJECTS

Infrastructure Automation & AI ↗

Agentic workflows that automate infrastructure documentation, deployment, and operational tooling — a scoped, security-fenced multi-agent system (built in Kiro, with Amazon Q, Claude, and Codex) that mirrors a real build-and-review pipeline.

[Agentic Workflows](#) • [Deployment Automation](#)

Home Lab Infrastructure [↗](#)

Proxmox cluster with Linux servers, networking labs, VPN, automation, and self-hosted services — a hands-on environment for network engineering practice and continuous learning.

[Networking](#) • [Linux](#) • [Automation](#)

Network & Cloud Labs [↗](#)

CCNP-track enterprise networking labs (OSPF, BGP, VLANs, HA) plus AWS cloud networking practice (VPC, CloudFormation) — documented as I build toward network engineering and infrastructure architecture.
